Strong Acid Cation Exchange Resin

DOSHION CGC 1200 is a strongly acidic, gel-type, polymer-based resin in spherical bead form with sulfonic acid group and is ideally suited as a heterogeneous catalyst for organic reactions. It has a low degree of cross linking, good mechanical stability and gives optimum performance in polar media

It is especially suitable for use in the applications of Bisphenol-A production, Contestations and esterification's of small polar molecules, hydrolysis of ethers and esters. The special properties of this product can only be fully utilized if the technology and process used correspond to the current state-of-the-art. Further advice in this matter can be obtained from Doshion's Technical Team.
